Credit Name: CSE 2140
Assignment Name: Chapter 6 Methods

Understanding the Problem

How did you approach understanding the challenge:
For exercise 1 I knew that I would just need 3 methods that could display differents lines to end up creating a house, I didn't need any inputs or loops or other structures, just methods. For exercise 5 was just like the previous chapters with a added method.

Were there any parts of the problem you found confusing at first?
The main parts I found confusing was creating the actual lines for the house, I couldn't find them on my keyboard for the longest time, and ended up having to ask a friend. I also had to look up on how to make the code go to a different line in the method and found out it was \\n. For exercise 5 I struggled with the curly brackets, and figuring how many to use and where to use them.

Did you create a plan or break the problem into smaller steps before coding?
For exercise 1 I broke it up into the different parts of the house, and for exercise 5 I broke it up into the different structures such as the inputs and the methods.

How did you decide on the tools, data structures, or algorithms to use?
For both I knew that I would need a method, and the rest was just like the other chapters and skillbuilders.

Did you write the code in small pieces or attempt the entire solution at once?
For exercise 1 I broke it up into the different parts of the house, and for exercise 5 I broke it up into the different structures such as the inputs and the methods.

How did you test your solution along the way to make sure it was working?
For exercise 1 I would just test it after each section of the house, and for exercise 5 I just tested at the end.

What part of the problem was the most difficult for you?
Finding the keys on the keyboard, and properly using the curly brackets.

How did you handle moments when you felt stuck or unsure of what to do next?
Asked friends, tried to use w3schools, and used google.

Was there anything you learned that you think will help you with future challenges?
How to properly use curly brackets and methods.
