Include your IPO Chart with your code in Eclipse IDE: We will discuss and demonstrate this in the computer lab.

IPO CHART

Program name:	Java CH5 Exercise 3	
INPUT	PROCESS	OUTPUT
Hint: What will the user input?	Hint: What is the program going to do with the input information?	Hint: What will the screen display after user input?
The user doesn't input anything, I guess you could consider the \$2500 a input from the application itself.	Compound the 2500 by 7.5% as many times as it takes to make the 2500 5000 and the number of times it compounded will be the number of years it will take for 2500 to compound into 5000.	Output the amount of years it took, the compound percent, the starting amount, and the final balance.
