

Credit Name: CSE 2140

Assignment Name: Chapter 5 Looping structures

Understanding the Problem

How did you approach understanding the challenge:

For exercise 3 I knew I would have to utilize a for loop to keep track of the amount of times the starting balance was multiplied by the rate. For exercise 5 I thought I could use my previous digits skillbuilder, but I soon realized that it would be a lot harder and would contain a loop due to the fact that it doesn't limit the amount of digits the user can enter.

Were there any parts of the problem you found confusing at first?

For me the parts that I struggled with the most was figuring out how to use the counter variable to keep track of the amount of times the rate was multiplied so in this part I needed to use w3schools and a friend's knowledge. I also struggled with getting the loop in exercise 5 to display and calculate the digits from left to right instead of right to left, so in this part I needed to ask AI for help.

Did you create a plan or break the problem into smaller steps before coding?

Not really this time since there was really only one part to each and it was the loops.

How did you decide on the tools, data structures, or algorithms to use?

The CRT questions I did helped me realize that I needed to use the counter tool for exercise 3, I also knew I would need a loop just it took me a bit to determine that I needed to use a for loop instead of a if or a while loop.

For exercise 5 I needed AI to help me realize I needed a for statement and the use of char. It also told me that I needed to use string as it acts like a train and would be the easiest way to pick the digits from left to right instead of right to left.

Did you write the code in small pieces or attempt the entire solution at once?

I attempted both as entire solutions.

How did you test your solution along the way to make sure it was working?

For both I didn't test until the end since there was only 1 part you could really only test at the end.

What part of the problem was the most difficult for you?

Figuring out how to go from left to right instead of right to left in exercise 5.

How did you handle moments when you felt stuck or unsure of what to do next?
I turned to w3schools, friends, and eventually AI.

Was there anything you learned that you think will help you with future challenges?
How to utilize the string function, the char function, counter, the i function.
