

Instructions:

1. Click on File -> Make a copy

Include your IPO Chart with your code in Eclipse IDE: We will discuss and demonstrate this in the computer lab.

IPO CHART

Program name:	Java	
INPUT	PROCESS	OUTPUT
Hint: What will the user input?	Hint: What is the program going to do with the input information?	Hint: What will the screen display after user input?
The user enters the weight of the package and it's dimensions (length, width and height).	The program then calculates the the total cubic meters of the packages size. The program then compares the packages weight to the limit, and the total cubic meters to the limit, to see if the package is too large or too heavy.	If the package is too heavy it displays <i>TOO HEAVY</i> , if the package is too big it displays <i>TOO LARGE</i> , if it both it displays <i>TOO HEAVY AND TOO LARGE</i> .
